

The Problem

The Solution

Top or Bottom Mount

Finally a picture light that lights the entire canvas and make the art look as good as it did in the gallery.

Traditional picture lights with bare light bulbs only light the top of most larger paintings and can cause damage to the art from the heat and UV.

Masterpiece Series® and **Gallery Series®** lights your painting evenly from top to bottom, bringing to life even the darkest hidden details.

They are designed to meet the strict requirements and guidelines set by the Museum Lighting Committee of the Illuminating Engineering Society of North America.

The optical system uses low wattage MR-11 lamps and patent pending UV and IR filters that blocks harmful ultra violet light and excessive heat that can damage valuable art.

The **Masterpiece Series®** has a **full range dimmer** hidden on back of housing to allow individual control of each painting in a collection.

Feel free to contact me regarding your art lighting needs.

Both **Masterpiece Series®** and **Gallery Series®** are designed to light your art work evenly from top to bottom.

The optical design includes a US patent pending system with both **UV and IR** filters that blocks harmful ultraviolet light and excessive heat that can damage and fade your valuable art.

Masterpiece Series® is custom built for each painting and is designed with custom mounting arms and finishes to match your artwork. Each has a **full range dimmer** hidden on back of housing to allow individual control of each painting in a collection.

Color corrected halogen light in a narrow beam evenly lights your painting from top to bottom.
